Electronic Shelf Label (ESL)

Electronic Shelf Labels (ESLs) are key to retail digitalization, mainly in LCD or e-paper variants. LCD ESLs need continuous power – costly, complex to wire, and with safety risks. E-paper ESLs, however, feature zero-power static display, offering 7-10 years of battery life from two button cells with no wiring. Energy-efficient and easy to deploy, e-paper ESLs are the preferred solution for retailers going digital

Swing Dual-Sided Display

In the fast-paced world of retail, the shelf edge is your most valuable real estate—but it's also the most vulnerable. Traditional screens are easily shattered by wandering trolleys and heavy restocking carts.

Swing LCD Shelves Display are designed to swing freely upon contact and snap back into position, ensuring your message stays live and your hardware stays intact.
